Equine Embryo Transfer

Embryo Transfer Services

The Section of Reproduction at Penn Vet's New Bolton Center provides comprehensive care of horses, cattle, sheep, swine, goats and camelids. Our clinicians have more than 80 years of combined experience and are board certified by the American College of Theriogenologists.

Based at the Georgia and Philip Hofmann Research Center for Animal Reproduction since 1970, we combine years of clinical experience with the latest research and technology. We look forward to the opportunity to work with you and your animals.

The Hofmann Center offers a full range of embryo transfer services. Clients can choose to use one of Hofmann Center's resident recipient mares or provide their own recipient mare. We accept embryos transported from other facilities and recover embryos for domestic transport. Embryo freezing and donor mare superovulation and oocyte transfer are available upon request.

The Hofmann Center is located on Bartram Road, 1 mile SW of the main New Bolton Center campus, Kennett Square, PA 19348.
