OUR COVER STORY: Meet Billy the Philly wonder dog, gunshot survivor and hero.

It took our dedicated veterinary trauma team to come through for this brave dog. On a late night walk last January, Billy, a 5-year-old bull terrier, and his family were confronted by two armed men. When Billy sensed that his people were in danger he started barking. The gunmen opened fire, hitting Billy in the chest. With a police escort to clear the way, Billy was rushed to Ryan Hospital, where Emergency Service staff moved quickly to resuscitate and stabilize the courageous canine—he had lost about a third of his blood—while surgeons Rachel Williams and Lillian Aronson set out to save his life. The bullet that hit Billy tore through his heart, left lung, diaphragm, liver, stomach, and spleen before ripping out through his left side. He had to lose portions of some of those organs during surgery. But he survived that surgery and a second operation as well. Over 30 Ryan team members helped care for Billy during his hospital stay.

Leaving Ryan Hospital, Billy was pretty close to being his paw-shaking, tail-wagging, happy self, enjoying the love from the humans who saved him.

Your generosity at work: Penn Vet’s Good Samaritan Fund, which provides lifesaving treatment for pets in need, helped pay for Billy’s expenses.

Billy awarded for bravery: Billy, whose story tugged at the heartstrings of animal lovers far and wide, was honored with the 2020 Pennsylvania Veterinary Medical Association’s Wodan Animal Hero Award.
Our Thanks to You

My genuine thanks to you for your loyal support of Penn Vet. As we move through this period of unprecedented challenge and change, and as we reflect upon Penn Vet’s role in our world, we think about you, our supporters, who make the work we do possible.

Our mission — to train the next generation of veterinary leaders who will advance health care outcomes and access, ensure global health, bolster sustainable agriculture, and create and support new interdisciplinary career paths — matters now more than ever.

We are truly grateful for your partnership in advancing this mission. Collectively, you have given more than $14 million over the last year — this represents an incredible investment in Penn Vet, and we are pleased to share with you the impact of your philanthropy in this annual donor report.

With appreciation,

ANDREW M. HOFFMAN, DVM, DVSC, DACVIM
The Gilbert S. Kahn Dean of Veterinary Medicine

PENN VET CIRCLE OF FRIENDS

We cherish those who choose to give annually to Penn Vet in a generous way. Our community grows stronger each time you give, fueling the Power of Penn Vet. In honor of you, our loyal donors, we bestow this recognition based on your years of giving:
As COVID-19 continues to challenge our community, New Bolton Center is staying ahead of the curve. We now offer free Telehealth options for both our referring veterinarians and our clients. Telehealth saves time, reduces the need for animal and personnel movement, and provides veterinarians with the flexibility to treat their patients while following best practices on social distancing.

A $5 MILLION GIFT LIGHTS THE WAY FOR A NEW CLINICAL SKILLS CENTER AT NEW BOLTON CENTER

Penn Vet is extremely grateful for a leadership gift of $5 million from Gail P. Repe, CW’68, and Jim Repe, W’65, WG’67, HCN’10, to build a new clinical skills center on the New Bolton campus.

“In making this gift, we want to support students and provide the very best experience for them. The work of preparing tomorrow’s veterinarians is so incredibly important,” explained Gail Repe. “Investment in students pays such wonderful dividends when Penn graduates bring their knowledge and skills to veterinary practices near and far.”
The story of John Baxter Taylor Jr. reveals his exceptional achievements and contributions to the African American community and to veterinary medicine. Born in 1908, Taylor became the second African American to graduate from Penn Vet, and he was a star athlete with a passion for running. His legacy was solidified when he became the first African American to win an Olympic Gold Medal, helping the US medley relay team to victory at the 1908 London Summer Games.

Penn Vet honors John Baxter Taylor Jr. V’1908, recognizing his significant contributions. A scholarship bearing his name was established in 1993 by an estate gift from J. Maxwell Moran. The John Baxter Taylor Dean’s Scholarship funds a minority student’s education, and over 20 students have received this scholarship since its inception.

Penn Vet’s February calendar highlights various events, including Black History Month, Pet Dental Health Month, and Spay/Neuter Awareness Month. It also marks special occasions like Valentine’s Day, President’s Day, Ash Wednesday, Washington’s Birthday, and World Spay Day.

In 1908, John Baxter Taylor Jr. became the second African American to graduate from Penn Vet. He was one of the first members of Sigma Pi Phi, the first professional Greek letter organization for African Americans founded in Philadelphia in 1904. He was a star athlete, with a passion for running, and was well-known and admired throughout the African American community for his accomplishments, having earned 45 cups and 70 medals in his prolific career. He became a legend as the first African American to win an Olympic Gold Medal when he helped the US medley relay team to their victory on July 25, 1908, at the London Summer Games. Tragically, he died five months later from typhoid pneumonia. He was just 25.

John Baxter Taylor Jr.: The first African American to win an Olympic Gold Medal in the 1908 London Summer Olympic Games.

Our loyal friends, including the Estate of Neal R. Frank, Jay G. Goldman, and others, are recognized for their contributions. The calendar for February highlights various important dates and events, including Black History Month, Pet Dental Health Month, Spay/Neuter Awareness Month, Groundhog Day, Valentine’s Day, President’s Day, Ash Wednesday, Washington’s Birthday, and World Spay Day.
Sparrow, a Morgan horse, was the first foal born in the 2020 season. She was admitted through the Emergency Service and was born prematurely via emergency C-section. After receiving round-the-clock skilled nursing at New Bolton Center’s neonatal intensive care unit, Sparrow survived and has become a lively dancing filly.

TRUE BLUES GET CARDIAC CARE

Mink and Titus Cloud, half-brothers, are true Russian Blues. Both have heart murmurs — a condition that is not uncommon in cats — but Mink was diagnosed with hypertrophic cardiomyopathy by the Ryan Hospital Cardiology team. As a result, Mink is a regular visitor in Cardiology, and Cardio nurse Lila Sierra, CVT, gives him a warm welcome each time he comes in for a checkup. Dr. Mark Oyama, one of the nation’s top veterinary cardiologists, oversees his care.

ALL IN THE FAMILY

Expect a deeply personal relationship with your veterinarian when New Bolton Center’s Field Service comes to call. Bringing with them state-of-the-art technology that can be taken into the field, Field Service veterinarians arrive with a fully equipped truck, expert knowledge, and compassion for their patients. We see over 20,000 patients per year, including this happy family, bringing with us the best of New Bolton Center’s primary and emergency care.

REGENERATIVE AGRICULTURE IS THE FUTURE OF FARMING

This group of heifers is performing important soil restoration and regeneration using intensive grazing practices. Each day the cows are moved around the field, slowly eating grasses and cover crops, while their manure provides nutrients and essential microbiota to the soil.

New Bolton Center’s Farm of the Future will be a model for progressive animal-centric agricultural practices and a center for education and research.

A BOXER WITH BOUNDLESS ENERGY

Louie has been coming to Ryan Hospital since he was a puppy for his well checks, including all his vaccinations. When this energetic boxer was playing basketball with his family, he jumped so high he bumped his head on the net! A quick trip to Ryan confirmed all was well and Louie continues to happily play every day.

Your gift provides a lifetime of preventative care: The Friends of Ryan Fund ensures that our patients receive primary care in a world renowned academic veterinary hospital that offers compassionate expertise and immediate access to a wide range of specialty services.

THE GO-TO PLACE FOR PETS WITH PALATE DEFECTS

Auggie was born with a hole in the roof of his mouth, which severely affected his ability to breathe or eat properly. Our veterinarians came up with an innovative repair: by taking cartilage from Auggie’s ear and transplanting it into his mouth, our surgeons skillfully covered the defect between his nasal canal and mouth. To everyone’s delight, Auggie’s mouth healed without any problems. Auggie is now a fully grown kitty who loves to play!

“Auggie’s case shows us that there are no limits in what is achievable when you have a team of skilled and dedicated people working together,” says Dr. Alex Reiter, Auggie’s surgeon.

A NATIONAL RESEARCH AND DEVELOPMENT CENTER FOR DETECTION DOGS

Inspired by the Search & Rescue Dogs that responded following the attacks on 9/11, the Penn Vet Working Dog Center opened on September 11, 2012, and serves as a national research and development center for detection dogs. Pictured here is PVWDC Graduate Rigo, an explosive detection and tracking dog. Rigo is partnered with Officer Edward Vincent, a School Resource Officer in the Robbinsville, NJ PD School District. Rigo is named in honor of John Rigo, a businessman who lost his life in the attacks of 9/11.

Underwritten by Merck Animal Health
A HEART FULL OF LOVE

Mookie was an energetic shitzu who loved chasing trains, going for long walks, and running after frisbees. He was diagnosed with mitral valve disease at age nine. Full of unconditional love, he lived another seven happy years with careful monitoring and medication. His family is determined to help other dogs with MVD and has created a fund to honor their friendly and outgoing companion.

THE MOOKIE MVD FUND

The Mookie MVD Fund provides support to the Cardiology Service at Ryan Hospital, which is engaged to understand and treat mitral valve disease. Our comprehensive research seeks to understand the biomechanics of the disease, improve treatment via medication, and diet modification and develop new echocardiographic techniques to better diagnose and assess severity of MVD in dogs. Penn Vet is the birthplace of specialized veterinary cardiology and is proud to be leading the way toward finally solving the great problem of MVD.
Melanomas, a type of cancerous tumor, are common in gray horses. Paramount Importance, a beautiful Holsteiner, had a large melanoma growing in the deep musculature of his neck near his spine. Using New Bolton Center’s robotic CT to determine its precise size and location, Drs. Dean Richardson and David Levine surgically removed the growth. Following surgery, a series of four therapeutic vaccinations will help keep him cancer free.
THE GREATEST GIFT: HEALING IN THE MOST WONDERFUL WAY

Teddy came to Ryan Hospital with severe burns after being rescued from a house fire. He was admitted through Emergency Service, for oxygen therapy and then transferred to the ICU and surgery for treatment of his wounds. Surgery made the important decision to debride his wounds sooner rather than later – making all the difference in his recovery. The ICU played a huge role in his lung recovery, placing him in the oxygen cage for a few days and keeping him comfortable with pain and wound management.

A big thanks to Penn Vet Board of Overseer Richard Lichter, founder of the Richard Lichter Charity for Dogs, for fully supporting Teddy's care.
