

Fully Funded Clinical Trial for Dogs with B Cell Lymphoma

Dogs with stage II–V B cell lymphoma may be eligible to enroll.

The purpose of this study is to determine the safety and effectiveness of genetically engineered CAR–T cells, made from your dog's own immune cells, as a treatment for your dog's cancer.

Patients will need to travel to the University of Pennsylvania for all trial visits.

Contact Dr. Nicola Mason
BVetMed, PhD, DACVIM,
FRCVS or Mary Beth Boland,
CVT for more information or
to enroll in the trial.
